

Clipper Care

When it comes to caring for your blades, daily maintenance is required to maximise their lifespan & keep them working at their highest standard.

Clipper Cooling Spray

Recommended use: Every 10-15 minutes when blade starts to get warm.

Apply directly to your blade whilst in use to instantly cool them down and avoid overheating.

Clipper Oil

Recommended use: Before each dog, at the end of every day and after you've washed your blades with Blade Wash.

1. Apply a small dab of oil directly onto your blade on the six key oiling points.
2. Put your blade back onto your clipper & turn the clipper on, so that the oil can evenly distribute itself.

Blade Wash

Recommended use: Once every 1-2 weeks.

1. Pour roughly 1cm of blade wash into a clean Tupperware container.
2. Turn your clipper on with the blade fitted, submerge just the blade into the blade wash & leave the blade submerged for 10-15 seconds with the clipper running.
3. Put the blade on a piece of tissue to dry for 15-20 minutes.
4. Once dry, apply clipper oil to lubricate the blades before use.
